

Practice Questions

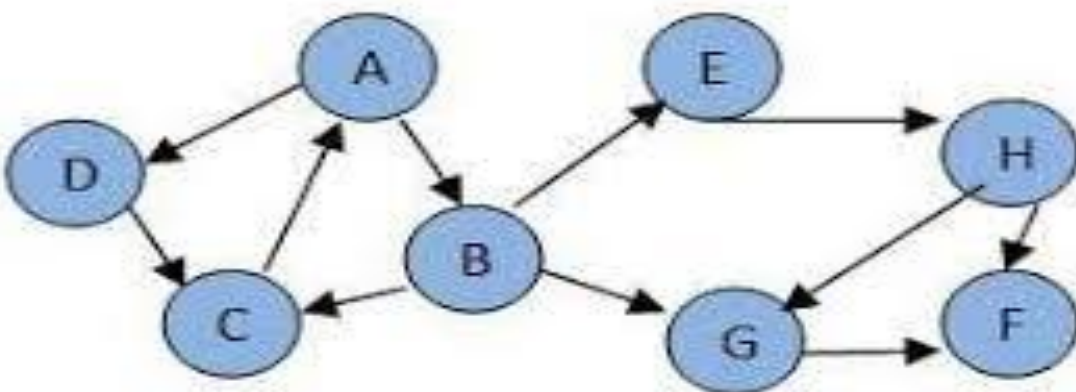

Task 1:

Implement the graph by using dictionaries

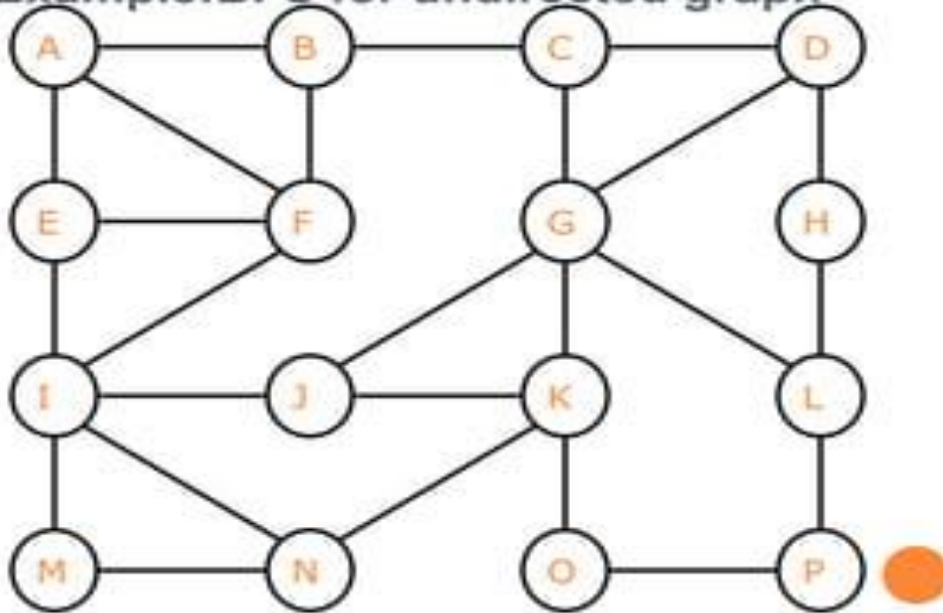

1

2

An Example: BFS for undirected graph

Task 2:

Write a program to generate the path from one node to the other node?

Task 3:

Program to generate all the possible paths from one node to the other node?

Task 4:

Implement BFS, DFS, UCS, A* and Greedy DFS algorithms on given graphs.

Task 5:

Consider the list of characters: ['M', 'O', 'H', 'S', 'I', 'N']. Show how this list is sorted using the following algorithms:

- Bubble sort
- Selection sort
- Insertion sort
- Merge sort
